

XAMPP

CONEXION LOCALHOST

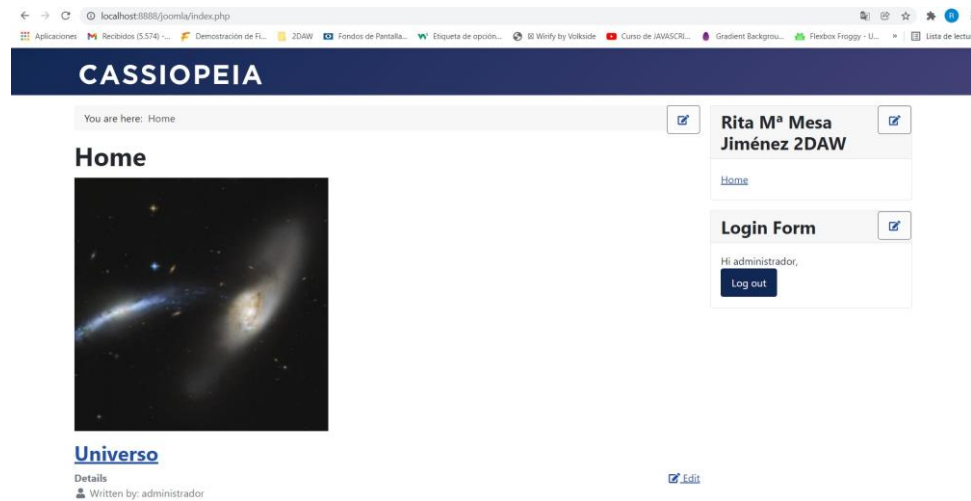

```
# Copyright (c) 1993-2009 Microsoft Corp.
#
# This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
#
# This file contains the mappings of IP addresses to host names. Each
# entry should be kept on an individual line. The IP address should
# be placed in the first column followed by the corresponding host name.
# The IP address and the host name should be separated by at least one
# space.
#
# Additionally, comments (such as these) may be inserted on individual
# lines or following the machine name denoted by a '#' symbol.
#
# For example:
#
#       102.54.94.97       rhino.acme.com   # source server
#       38.25.63.10      x.acme.com       # x client host

# localhost name resolution is handled within DNS itself.
#
#       127.0.0.1        localhost
#       ::1              localhost
#       127.0.0.1        superRita.org
#       127.0.0.1        www.superRita.org
# Added by Docker Desktop
192.168.0.108 host.docker.internal
192.168.0.108 gateway.docker.internal
# To allow the same kube context to work on the host and the container:
127.0.0.1 kubernetes.docker.internal
# End of section
```

VIRTUALHOST

```
<VirtualHost *:8888>
    ServerAdmin webmaster@dummy-host2.example.com
    DocumentRoot "C:\xampp\htdocs\pruebas\2DAW\2daw\proyectoSuper\super"
    ServerName www.superrita.org
    ServerAlias superrita.org
</VirtualHost>
```
